Life is good when there's a God who can forgive you of all your sins.

You are not prepared for this, brace for impact....

"When we were utterly helpless, Christ came at just the right time and died for us sinners. Now, most people would not be willing to die for an upright person, though someone might perhaps be willing to die for a person who is especially good. But God showed His great love for us by sending Christ to die for us while we were still sinners. And since we have been made right in God’s sight by the blood of Christ,

he will certainly save us from God’s condemnation. For since our friendship with God was restored by the death of his Son while we were still his enemies, we will certainly be saved through the life of his Son. So now we can rejoice in our wonderful new relationship with God because our Lord Jesus Christ has made us friends of God." — Romans 5:6-11

"Therefore, since we have been made right in God’s sight by faith, we have peace with God because of what Jesus Christ our Lord has done for us. Because of our faith, Christ has brought us into this place of undeserved privilege where we now stand, and we confidently and joyfully look forward to sharing God’s glory." — Romans 5:1-2

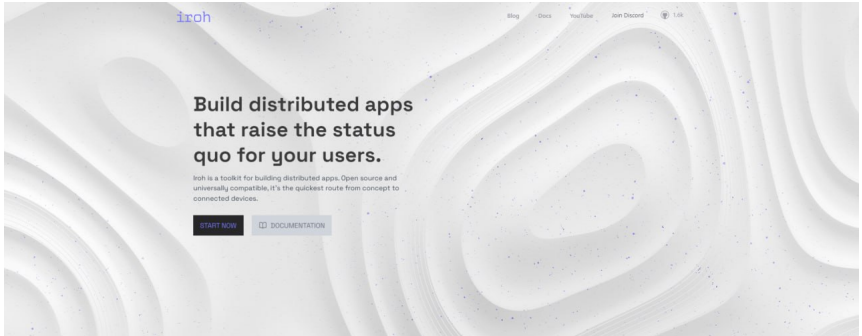
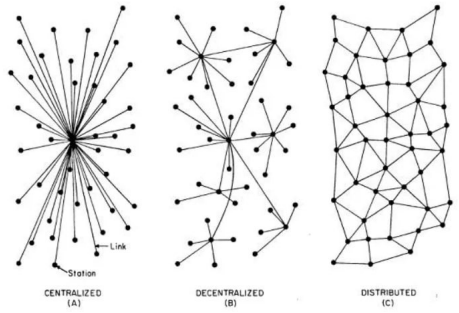
Hey □

Probably one of the most interesting projects I've discovered recently. It's called Iroh. #Iroh #DistributedSystems @Dagmawi_Babi



Iroh.computer Iroh is a toolkit for building distributed apps. It's open source and universally compatible, Use cases: * Live collaborate on anything * No central server required * Scaling without limits They built example projects on top of it. One is called SendMe it's a free service for sending files and folders of any size with 4Gbps connection. It works by connecting sender and receiver directly, so there's no need to upload to a server, which means no cost! Interrupted downloads pick up where they left off. And data is automatically verified for correctness on both send and receive. There's also DumbPipe which connects two computers with a single command without accounts or any configuration to pipe data between them. You can build whatever you want on top of it. #Iroh #DistributedSystems @Dagmawi_Babi

In simplest terms, Imagine if i wanted to send you a movie that's like 2GB in size, Normally I would have uploaded it to google drive or some online server and then send you a link to download from. But with Iroh I don't have to upload it to any server. All we have to do is install Iroh to create a direct peer to peer connection between our PCs and then directly send you the movie. You can imagine the things this unlocks. #Iroh #DistributedSystems @Dagmawi_Babi



Very brief explanation on the difference between centralized, decentralized and distributed systems. Centralized systems use client/server architecture where one or more client nodes are directly connected to a central server. For Decentralized and Distributed Systems the difference is subtle but it's distinct. A decentralized system is a subset of a distributed system. The primary difference is how/ where the “decision” is made and how the information is shared throughout the control nodes in the system. Decentralized means that there is no single point where the decision is made. Every node makes a decision for it’s own behaviour and the resulting system behaviour is the aggregate response. A key characteristic is that typically no single node will have complete system information. Distributed means that the processing is shared across multiple nodes, but the decisions may still be centralized and use complete system knowledge. #Resources #Decentralized #Distributed #Lessons @Dagmawi_Babi

I used Google Podcasts for years and years but now that it's shutting down I need a new refuge for my podcasts. Hope asked for podcast app recommendations and y'all told her good suggestions. And ofcourse I tried all of your suggestions and many more I found online. Two stood out for me, @DaveDumps's suggestion AntennaPod which is open source and completely free and @Little_Cellist's

suggestion which was PocketCast. I was trying all of them for the past week straight and honestly I really wanted to love AntennaPod but I kept going back to PocketCast. PocketCast's UI is just very lovely to me. Feels very comfortable to use and doesn't feel blank or incomplete like AntennaPod. So yeah, exported all my Google Podcast subscriptions over to PocketCast and now I'm back to binging my fav podcasts. #Podcasts #GooglePodcasts #AntennaPod #PocketCast @Dagmawi_Babi
